The Chicago Police Department developed this web application to provide residents of the City of Chicago with a tool to assist them in problem-solving and combating crime and disorder in their neighborhoods. It is based upon the CLEAR (Citizen Law Enforcement Analysis and Reporting) system developed by the Department for use by its police officers.

This web application enables you to search the Chicago Police Department’s database of reported community concerns. You will be able to see choropleth maps and tables of reported concerns summarized into categories. The categories are summarized by Police Beat & District, Ward, Community Area and Census Tract. The database contains 1 year of information which you can access in blocks of 90, 180, 270 and 365 days. Data is refreshed daily.

The summary counts reported on this site should not be considered official CPD statistics.
Select the geography used to summarize the concern data. There are five summary geographies: Police Beats, Police Districts, Wards, Community Areas and Census Tracts.

Select the category of interest. The data has been aggregated into distinct categories including gangs, narcotics and prostitution.

This option allows for viewing open or closed concerns. Both can also be counted together.

Select the desired timeframe. There are four timeframes the user can choose from, the past 90, 180, 270 and 365 days. These ranges are akin to the past 3, 6, 9, and 12 months.

Click the launch map button. The Concerns Summary map will open in a new browser window. It’s recommended that Tabbed Browsing not be used with any CLEARMAP web application.
